GLADIOLUS COLLECTION

PLANTING

Plant dahlias May 1st to June 5th, 2 to 3 feet apart. Lay tuber horizontally, sprout up, in hole 6 inches deep. (Never stand a tuber on end.) Cover with 3 inches of soil; later, as the plant grows, fill in the remaining space. If ground is poor, dig deeper, and put rich top soil in bottom of hole under tuber. For large blooms, allow but one to a branch, removing extra buds while very small. Pompons may be planted closer together and need no disbudding. Remove all fading flowers. Thus cared for they bloom freely until frost.
